

INTERCEPT

Densifier

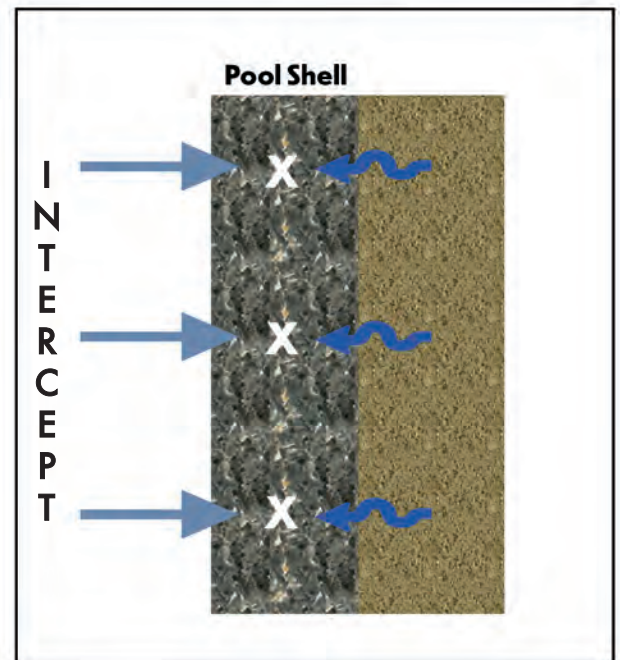

Densify | Exfoliate | Penetrate | Protect | Strengthen

INTERCEPT

Benefits

- Strengthens the surface of the concrete
- Densify and strengthens the concrete
- Controls hydration of new concrete
- Exfoliates entrapped salts
- Reduces rust formation
- Reduces ASR (alkali silica reactivity)
- Accelerates concrete curing times

Apply two coats with a pump type sprayer
Available in 5 gallon pails
Coverage 5 Gal. 500-750 Square Feet

INTERCEPT

Densifier

Densify | Exfoliate | Penetrate | Protect | Strengthen

Application Standards

INTERCEPT meets or exceeds the following standards

- ASTM D-56-91 - Flash Point: None
- ASTM D-5084-91 - Permeability
- ASTM C-666 - Freeze/Thaw cycles
- ASTM C-666 B - Salt Resistance
- ASTM C-67 - Efflorescence
- Contains no VOC's
- EPA Compliant

INTERCEPT

Pool- Shell- Primary-Waterproofing

INTERCEPT is a highly penetrating, highly viscous concrete densifier, to be used as the Pool Shell Primary waterproofing. Upon application, INTERCEPT penetrates deeply into the concrete matrix, on a molecular level, searching and filling out all the voids that exist within any concrete structure. INTERCEPT bonds with the free calcium and lime within the concrete, transforming itself into gel. It is important to note that the concrete remains able to "breathe" allowing vapors from within the concrete to escape. Apply INTERCEPT with a low-pressure pump type sprayer. Apply two coats in quick succession removing excess material. DO NOT allow excess material to dry on surface.
